

React JS Machine Test – Real Estate Web Platform (MVP)

Objective

Build a **responsive property listing web application** using **React JS** that demonstrates search, listing, user roles, and basic interactions as per the MVP requirements.

Tech Stack (Mandatory)

- React JS (Functional Components)
- React Router
- Context API or Redux (any one)
- CSS / MUI / Bootstrap (any one)
- Mock APIs (JSON / local state / dummy data)
- Google OAuth – *mocked flow acceptable*

Core Requirements

1. Search & Navigation

Features

- Location Search:
 - Search properties by **City / Locality / State**

- Filters:
 - Property Configuration (1BHK, 2BHK, 3BHK)
 - Budget Range (Min–Max)
 - Possession Period (Ready / 6 months / 1 year)
- Map View (Mock):
 - Display properties on a map (Google Maps iframe OR placeholder component)

Expected Screens

- Home Page with:
 - Search bar
 - Filters
 - Property cards grid
 - Toggle between **List View / Map View**

2. Property Listings

Property Card

Each card should display:

- Property Name
- Price
- Location
- Configuration
- “View Details” button

Property Details Page

Route: /property/:id

Must show:

- Price
- Full Location
- Amenities list
- Possession Date

- Sample Flat Video (embedded / placeholder)
- Building & Locality Video (embedded / placeholder)

3. User Profiles

Buyer

- Can browse without login
- Must login (Google / mock login) to:
 - Save favorite properties
 - Schedule video call / site visit
- Buyer Dashboard:
 - Saved properties
 - Scheduled appointments

Seller (Builder)

- Registration required (mock payment checkbox)
- Seller Dashboard:
 - Add new property (form)
 - Upload videos (file input / URL)
 - View buyer inquiries
 - View scheduled appointments

4. Communication Tools (Mocked)

-  Phone Call:
 - Clickable phone number (tel: link)
-  Video Call Scheduling:
 - Date & time picker
 - Confirmation screen

- 🏠 Site Visit Scheduling:
 - Date & time picker

5. Admin Panel (Basic)

Route: /admin

Features

- View all property listings
- Approve / Reject property listings
- View registered buyers and sellers
- View all scheduled appointments

6. Notifications (Mock)

Trigger notifications on:

- Appointment scheduled
- Appointment approved

Implementation:

- Toast messages / alerts
- Bonus: Email/SMS toggle UI (no backend needed)

7. Authentication & Security

- Google Login (mocked allowed)
- Protected Routes:
 - Buyer Dashboard
 - Seller Dashboard
 - Admin Panel
- SSL – assumed (mention in README)

8. Monetization (UI Level)

- Seller Registration Fee:
 - Checkbox or mock payment screen
- Premium Listing Option:
 - Toggle while adding property
 - Premium badge on property cards
